

Equipment/Medicine Needed

- Equine eye ointment, especially antibiotic
 - Equine eye wipes
 - "Dermoline" equine wound ointment
 - "Phenylbutazone" sachets
- Equine de-worming medicine (oral worming paste, preferably syringe form)
 - "Deflect" equine fly ointment
 - Fly sprays
 - Sterile water sachets
- Dressings - 20cm by 10cm or larger, one side non-stick
 - Self-adhesive bandage rolls (Vetrap or similar)
 - Gamgee dressings (all sizes)
 - Animalintex
 - Micropore medical tape (the wider the better)
 - Wide sellotape (5cm/2 inches wide only)

We currently have enough wound ointments such as Germolene, head collars, hoof picks, grooming brushes and padding material to last for a while and will update the website when we need these items again

Dressings, Micropore, sterile water sachets and Sellotape can be purchased locally.

Items such as "Dermoline", "Deflect", eye wipes, Gamgee dressings and Animalintex can be bought from equine shops or websites.

You may need to ask your vet about de-worming medicine, "Phenylbutazone" and antibiotic eye ointment.

Thank you for your support!
